Education

University of Florida (UF) - Gainesville, FL GPA: 4.0/4.0

Master of Science in Computer Science, Focus in Human-Centered Computing *May 2026*

- **Coursework:** Human-Computer Interaction, Advanced UX Design, Software Engineering
- **Involvement:** Dance Marathon at UF's Web and App Development Team

Bachelor of Science in Computer Science, Certificate in Artificial Intelligence *Dec 2024*

Skills

Languages: HTML/CSS, JavaScript, Typescript, Gherkin, Java, Python, C++, C#, Sax Basic, C, SQL
Libraries/Frameworks: React, Angular, React Native, Vite, Cypress, Selenium, Jest, Node, MaterialUI, Bootstrap, .NET
Software: Figma, GitHub Copilot, Cursor, Codex, GitHub, Jira, Miro, Jenkins, Microsoft Suite, Cadence AWR

Experiences

Associate Software Engineer - Fidelity Investments *Aug 2026 – Present*

- Led front end design and development of a full-stack trading platform on a team of 4 using **Angular** and **TypeScript**
- Built an in-app assistant that turns machine learning stock forecasts into plain-language insights for first-time investors
- Reached over 1,300 automated tests and 95% code coverage using **Vitest**, **Playwright**, and **Jenkins**

Graduate Teaching Assistant (Operating Systems) - University of Florida *Aug 2024 – Apr 2026*

- Grading Linux-based project and homework submissions of 125 students per week
- Continuously improving a critical class in UF's Computer Science Catalog taken by over 600 students per semester

Software Engineering Intern - Fidelity Investments *Jun 2025 – Aug 2025*

- Delivered a full UI redesign for a production application in an Agile environment, organized using user stories in Jira
- Integrated monorepo UI components using **Angular**, **HTML**, and **CSS**, reducing redesign development time by 80%
- Automated the testing of UI features using **Selenium**, **Gherkin**, and **Java** to ensure quality in a production environment
- Piloted contextual AI tools within the business unit, providing feedback on how existing workflows could be improved

Software Engineering Intern - Northrop Grumman *Jun 2024 - Aug 2024*

- Crafted a GUI with **.NET** after 3 user interviews and revising paper prototypes throughout 2 cycles to design it
- Established backend support in **C#** to collect and distribute data for a drop test device including csv's and video footage
- Compiled semiconductor equipment data automatically, impacting workflow efficiency of 5 process engineers

Software Engineering Intern - Akoustis Technologies (SpaceX) *Jul 2023 - Feb 2024*

- Streamlined design report creation, reducing processing time from 2 days to 2 minutes using **PyQt**
- Utilized **Sax Basic** to enhance efficiency in Cadence's AWR software for Modeling Engineers by 500%

Projects

SmartChats HCI Research *Jan 2026 – Present*

- Building the front end for an AI learning platform using **Vite**, **React**, **Typescript**, **HTML**, and **CSS**
- Reducing response time between students and teaching assistants from upwards of 24 hours to 1 minute via a chatbot
- Supporting operations of 4 courses across 3 accredited international universities through monthly application updates
- Applied **GitHub Copilot** to development workflows to complete epic-level projects in minutes

Personal Portfolio Site - seancheema.com *Dec 2024 – Present*

- Continuously improving a website that showcases my work and personality throughout my career
- Designing interfaces and experiences using **Figma** and developing the site using **React**, **Typescript**, **HTML**, and **CSS**

FrontRunner *Jan 2025 – May 2025*

- Ideated an all-in-one storefront management platform within a team of 4 by following the Google UX Design Template
- Conducted 11 user interviews, brainstormed, created 3 scenarios/personas, and prototyped to understand target users
- Created and tested a MVP prototype using **React**, **Javascript**, **Bootstrap**, **CSS**, **Cypress**, **Jest**, and **GoLang**

Dance Marathon App and Website - floridadm.org *Aug 2024 – May 2025*

- Headed the UI redesign via **Figma** to improve user experience and accessibility for an app for internal DM members
- Contributed to front end development for a production app and website using **React Native**, **React**, and **MaterialUI**
- Leveraged **Python** to automate processes to incentivize event participation for over 400 internal members
